

SAFTI

Patent-Entsafter und Saftspender für

Zitronen • Orangen • Grapefruits

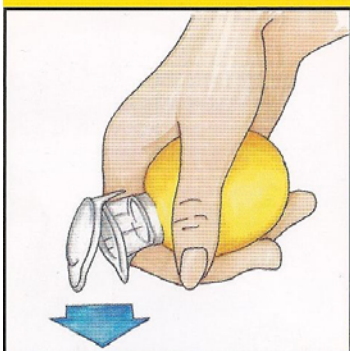

Direction for Use

Cut through the peel of the citrus fruit by twisting the serrated blade into it from the top. Hold the Fruit straight, i.e. upright, while doing so.

Keep twisting the juicer until the small screw thread touches the pulp. Now screw in the device until the upper rim of the threading is level with the fruit. Take hold of the fruit and squeeze it. The fruit will start flowing into the small container and is ready for use.

Lemons are frequently not used up all at once. Close the small container and put the fruit with the juicer in place into the refrigerator. The fruit will stay fresh for at least a week.

Cut oranges and grape fruits always on the smooth side, i.e. on the bottom side.
